

OnlyGigz Calendar — Developer Requirements

Objective

The OnlyGigz Calendar should function as a **booking and availability management system**, not as a generic calendar.

The calendar must connect directly with:

- Gig bookings
- Gig Board opportunities
- Entertainer availability
- Organizer posted gigs
- Booking status
- Schedule conflicts
- Outside/external gigs

The goal is for a user to immediately understand:

What dates am I available? What is pending? What is on hold? What am I officially booked for?

1. ENTERTAINER CALENDAR

The Entertainer Calendar should display the entertainer's complete working schedule.

Each date/time can have one of the following statuses:

AVAILABLE

The entertainer has specifically indicated they are available to accept gigs.

UNAVAILABLE

The entertainer has blocked the date or time and should not be considered available for booking.

HOLD

The entertainer is temporarily holding the date/time for a potential booking that has not yet been confirmed.

PENDING

There is an OnlyGigz booking/application associated with this date, but it has not been confirmed.

CONFIRMED

The entertainer has an official confirmed booking.

COMPLETED

The date represents a completed OnlyGigz booking.

OUTSIDE GIG

The entertainer has a booking that was received outside of OnlyGigz.

Outside gigs are important because they allow OnlyGigz to accurately detect availability and scheduling conflicts even when the booking did not originate through the platform.

2. AUTOMATIC CALENDAR CREATION

Confirmed OnlyGigz bookings should automatically create calendar events.

The entertainer should NOT have to manually add an OnlyGigz booking after it has been confirmed.

For example:

Dustin Ray — The Crawfish Boss

Wednesday, January 14
5:00 PM – 9:00 PM

The calendar event should be linked directly to the original booking record.

When the user clicks the calendar event, they should be able to access the booking details.

3. BOOKING AND CALENDAR MUST REMAIN SYNCHRONIZED

Calendar events created from OnlyGigz bookings should not be separate copies of booking information.

The booking should remain the source of truth.

For example:

If the booking time changes:

5:00 PM – 9:00 PM

to:

6:00 PM – 10:00 PM

the calendar should automatically update.

If a booking is cancelled, the calendar status should update accordingly.

If the gig is completed, the calendar event should change to Completed.

Do not require the user to update both the booking and calendar separately.

4. CLICKING AN EMPTY DATE — ENTERTAINER

When an entertainer clicks an empty date or time slot, provide actions such as:

Mark Available

Mark Unavailable

Add Hold

Add Outside Gig

The user should be able to select:

- Date
- Start time
- End time
- All-day status

For Outside Gigs, allow optional information such as:

- Event/gig name
- Venue
- Location
- Start/end time
- Rate
- Notes

Outside gigs should NOT create an OnlyGigz transaction, contract, payment or organizer booking.

Their primary purpose is schedule management and conflict prevention.

5. SCHEDULE CONFLICT DETECTION

OnlyGigz should automatically detect overlapping bookings.

Example:

Existing confirmed booking:

August 22

7:00 PM – 10:00 PM

New booking request:

August 22

8:00 PM – 11:00 PM

Display a prominent warning:

SCHEDULE CONFLICT

You already have a confirmed booking or unavailable time during this period.

The same conflict detection should apply to:

- Confirmed gigs
- Outside gigs
- Unavailable blocks
- Holds

Pending opportunities may display a softer warning rather than automatically preventing an action.

Do not silently allow conflicting bookings.

6. ORGANIZER CALENDAR

The Organizer Calendar serves a different purpose.

It should function as an **entertainment schedule and booking management calendar**.

Organizer dates should support statuses such as:

OPEN DATE

The organizer needs entertainment but has not yet posted a gig.

POSTED

A Gig Board opportunity has been posted for this date.

REVIEWING

The organizer has received applications/interested entertainers and is reviewing them.

BOOKED

An entertainer has been selected and the booking is confirmed.

COMPLETED

The event has occurred.

CANCELLED

The gig/event was cancelled.

7. CLICKING AN EMPTY DATE — ORGANIZER

When an organizer clicks an empty calendar date, provide actions such as:

Post a Gig

Add Existing Booking

Block Date

If the organizer selects **Post a Gig**, the selected date should automatically populate into the Post a Gig form.

Example:

Organizer clicks:

August 28

Then selects:

Post a Gig

The Post a Gig form opens with:

Date: August 28

already populated.

The organizer then completes the remaining gig information.

8. GIG BOARD INTEGRATION

The Gig Board and Calendar should communicate with each other.

When an organizer posts a gig:

Gig Board listing created → Calendar event created

The calendar event should show the appropriate status.

For example:

August 28

Live Entertainment

POSTED

Once entertainers begin applying:

REVIEWING — 6 Interested

Once an entertainer is selected:

BOOKED — Dustin Ray

The organizer should not need to manually update the calendar throughout this process.

9. ENTERTAINER GIG BOARD + AVAILABILITY INTEGRATION

Entertainer availability should eventually be usable by the Gig Board matching system.

Example:

An entertainer is marked:

Available Saturday, August 22

The entertainer's profile indicates:

- Cajun
- Zydeco
- Swamp Pop
- Louisiana service area

A Louisiana venue posts an appropriate opportunity for August 22.

OnlyGigz should be capable of recognizing that this opportunity matches the entertainer's availability.

The calendar should therefore be designed so availability data can later be queried by the Gig Board/matching system.

Do NOT build availability as purely visual calendar information.

Availability must be stored as structured data.

10. CALENDAR EVENT DETAILS

When a user clicks a confirmed OnlyGigz booking, display relevant booking information such as:

Event/Gig Name

Entertainer

Organizer/Venue

Date

Performance Start Time

Performance End Time

Location

Load-In Time

Agreed Rate

Booking Status

Payment Status

Contract Status

And:

VIEW BOOKING

The View Booking action should take the user to the full booking record.

11. PRIVACY

An entertainer's detailed calendar should NOT be publicly visible to organizers.

Organizers should only receive the availability information necessary to determine whether an entertainer can potentially accept a booking.

For example:

Available

or

Unavailable

Do NOT expose private calendar event names, outside gig information, personal appointments, notes or other private information.

12. EXTERNAL CALENDAR SYNC

The architecture should allow future integration with:

- Google Calendar
- Apple Calendar
- Other calendar providers if needed

Future desired behavior:

OnlyGigz → External Calendar

Confirmed OnlyGigz gigs can appear on the entertainer's personal calendar.

External Calendar → OnlyGigz

Busy periods from an external calendar can block OnlyGigz availability.

Private external calendar information should never be exposed to organizers.

OnlyGigz should simply interpret those periods as:

13. CALENDAR VIEWS

Both Entertainer and Organizer calendars should support:

Month View

Primary high-level schedule.

Week View

Useful for seeing exact performance times and conflicts.

Agenda/List View

Upcoming bookings displayed chronologically.

Mobile should prioritize Month and Agenda views for usability.

14. VISUAL STATUS SYSTEM

Calendar events should be visually distinguishable based on status.

Use the existing OnlyGigz design system and brand colors rather than introducing a completely separate calendar design.

Each status should have:

- Status indicator
- Status label
- Consistent styling
- Accessible contrast

Do not rely on color alone.

For example, the calendar event should actually display:

CONFIRMED

rather than requiring the user to remember that a particular color means confirmed.

15. IMPORTANT DATA MODEL REQUIREMENT

Calendar events should maintain relationships with their source records.

An event should identify whether it originated from:

- OnlyGigz booking
- Availability block
- Unavailable block
- Hold
- Outside gig
- External calendar event in the future

Where applicable, store the related record ID.

Example concept:

Calendar Event

User ID
User Type
Start Date/Time
End Date/Time
Event Type
Status
Booking ID
Gig Post ID
Source
Privacy Level

The developer can determine the exact database implementation, but these relationships need to exist.

16. MOST IMPORTANT WORKFLOW

The desired OnlyGigz workflow is:

Organizer posts gig

Gig appears on Organizer Calendar + Gig Board

Entertainers show interest/apply

Organizer reviews entertainers

Organizer selects entertainer

Booking becomes Confirmed

Confirmed gig automatically appears on Entertainer Calendar

Date/time is treated as booked for conflict detection

Booking details, contract and payment remain accessible from the calendar

Gig occurs

Booking becomes Completed

The calendar should update automatically throughout this process.

KEY DEVELOPMENT PRINCIPLE

The OnlyGigz Calendar is **not intended to compete with Google Calendar**.

It exists specifically to manage:

Availability + Gig Opportunities + Holds + Bookings + Conflicts

The booking system should remain the source of truth.

Users should not have to enter the same information in multiple places.

Whenever possible:

Booking action → Calendar automatically updates

rather than:

Booking action → User manually updates calendar

This automation is an important part of the OnlyGigz user experience.
